

MEDISANA®

Press Release

November 5th, 2012

CARDIOCOMPACT

Neuss. With the new MEDISANA® CardioCompact the health specialist presents for the first time a high quality upper arm blood pressure monitor with integrated travel alarm feature.

Sophisticated blood pressure monitor with innovative folding function

The patented folding function transforms this monitor from a powerful blood pressure monitor with 500 memory slots for each of 2 users into a practical travelling alarm clock with date, time and alarm settings and an option for 2 time zones. Completely folded the device is in travelling mode and thus prevents an accidental activation during a trip.

Large, well readable LCD display with bright blue background lightening

When the device is not in use the backlight turns off automatically and thus saves energy. At night this feature ensures that no light is distracting your sleep.

Connection to the VitaDock® Online

With the USB cable included in the box you can easily transfer your blood pressure results to VitaDock® Online. Online by Medisana® enables you to save, access, analyse and export your own health data such as blood pressure, blood sugar, weight and temperature and offers numerous features to view and display your data in the online portal. Additionally you can synchronize your data stored in the online portal with the VitaDock® app on your iPhone®, iPad® and iPod touch® and thus always have it readily available.
