MEDISANA products receive high ratings in the quality check of the German consumer magazine "Haus und Garten Test"

Neuss. Four positive test results – that is the good news from the product tests of the magazine "House & Garden Test" in its November/December issue. "This once again shows the quality of our products and confirms our product philosophy, which combines safe functionality with ease of use," says Dr. Heinrich Komesker, Board of Directors of MEDISANA AG.

The products tested were in the areas of facial saunas, infrared lights, as well as manicures/pedicures.

In the area of facial saunas the MEDISANA FSS Facial Sauna received a quality rating of "very good" (1.4) from the testers. The testers noted that the Model FSS provided "pleasant relaxation for the face and nose." In particular, the quick heat-up time in relation to competing products received positive emphasis.

In the manicure/pedicure category both Medisana devices received a test rating of "good." The manicure and pedicure device Manilux S/L was rated at 1.9, while Model MPS received a score of 2.3. The Manilux S/L device stood out by receiving the best function rating, which took into account, among other things, the Manilux S/L's excellent performance in fine and coarse files. Moreover, it demonstrated a particularly low risk of injury in comparison to competing products that were tested. Above all, the MPS drew attention because of its stepless speed control as well as the easy manner in which attachments can be changed.

In the product category of infrared lights the Model MEDISANA IRL 88254 received the rating of "good" (2.0) – with its intense and precisely focusable heat. The IRL especially distinguished itself by its large, high-power (150 W) infrared lamp with a secure base. "The heat field generated could hardly be better," in the opinion of the testers and "the thermal centre is ideal for an aching neck and ears at a distance of 50 cm with a diameter of about 10 cm."
